- Galle, Sri Lanka

PROFILE

Software Engineer undergraduate with hands-on GitHub projects in mobile development, machine learning, full-stack web systems, IoT, and data engineering. Skilled in Java, Python, Dart, SQL, Flutter, Spring Boot, Firebase, and Scikit-learn. Seeking internship opportunities in Mobile, ML/AI, or Full-Stack Engineering.

EDUCATION

National Institute of Business Management (NIBM), Sri Lanka

- Higher National Diploma — Computer Software Engineering
- Apr 2025
- Diploma of Education — Computer Software Engineering
- Dec 2023 -- Feb 2025
- Grade: 3.8 GPA

TECHNICAL SKILLS

- Programming Languages:** Java, Python, Dart, JavaScript, SQL
- Mobile Development:** Flutter, Android SDK, Firebase Auth, Firestore, Realtime Database
- Web & Backend:** Spring Boot, Thymeleaf, Node.js, React, HTML, CSS, Bootstrap
- Machine Learning & Data:** Scikit-learn, Pandas, feature engineering, model evaluation, Streamlit
- IoT / Hardware:** ESP32, Arduino, HX711 load cell integration
- Databases & Cloud:** Firebase, MySQL, Oracle Autonomous Data Warehouse
- Tools:** Git, GitHub, VS Code, Postman, Android Studio

SELECTED GITHUB PROJECTS

Personal-finance-management-app (DreamSaver)

2026

Java, Android SDK, Firebase Firestore, Room | GitHub

- Developed an Android finance app for expense/income tracking, bill reminders, and savings goals.
- Implemented repository-based data flow with local persistence and cloud sync support.
- Contributed features around dashboard summaries, goal tracking, and user-focused finance workflows.

ML_SolarManage (Solar Wastage Prediction)

2026

Python, Scikit-learn, Pandas, Streamlit | GitHub

- Built a complete ML workflow to predict daily solar energy wastage from household energy and weather features.
- Trained and compared regression models, then delivered an interactive Streamlit prediction dashboard.
- Structured preprocessing, feature engineering, model evaluation, and reporting for decision support.

ride-ease (Car Rental Management Platform)

2025

Java, Spring Boot, Thymeleaf, MySQL | GitHub

- Developed a two-sided full-stack rental platform with owner/customer modules and role-based access control.
- Implemented vehicle management, booking workflows, and payment tracking with Spring MVC services.
- Integrated frontend pages with backend controllers and service layers for operational booking flows.

iot_tea_pro (Tea Leaf Weighing and Worker Management)

2025

Flutter, Firebase Auth, Firebase Realtime Database | GitHub

- Built a Flutter IoT workflow for smart tea leaf weighing, worker login, and daily operations.
- Integrated live weighing logs and worker data in Firebase with OTP-based authentication support.
- Implemented worker-facing screens for records, analytics, and operational data visibility.

DW_MarketBasket (ETL to Oracle Autonomous Data Warehouse)

2026

Python, Pandas, SQLAlchemy, Oracle ADW | GitHub

- Created a Colab ETL pipeline to extract, transform, and load datasets into Oracle Autonomous Data Warehouse.
- Implemented chunk-based fact loading and SQL validation checks for scalable and reliable data ingestion.
- Added connection diagnostics and load verification queries to improve reliability of ETL execution.

ipd-health-hub (Healthcare Management Platform)

2025

PHP, MySQL, HTML, CSS, Bootstrap | GitHub

- Built a role-based healthcare web platform supporting doctor channeling, bed reservation, and medicine ordering.
- Implemented patient, pharmacist, and admin workflows with booking and dashboard/report views.
- Designed user-oriented healthcare pages to improve accessibility of core medical service flows.

EXPERIENCE

GM Motors

2026

Web Developer & Brand Designer

- Designed a professional brand identity logo and web site for a spare parts business.
- Improved digital presence and customer-facing communication through structured design and interface concepts.
